What is a learning tool?

A learning tool is a supplemental resource that is used in the course to enhance the learning environment. Learning tools can be used as simulations, exam tools, interactive texts, and videos. Each course that uses a learning tool will have information in the syllabus and/or a separate guide that can be found in the course itself.

What is the cost of a learning tool?

You can find the price of the learning tool in the student portal under the Booklist tab. Sometimes this will be an automatic charge to your student account, sometimes it will have to be paid directly, or purchased through the Bookstore. You can find out which learning tool your course will have inside the Booklist tab in your student portal.

Where can I find out more about a learning tool?

Each learning tool will have more information available in the Course Information area of the Modules Tab in your course. You can look both in the course syllabus and a student guide if there is one. You can find all of the learning tools that can be used in courses at the following article.
